

① 分数を小数・整数に変身させよう

$$\frac{3}{4} = \square \div \square$$

$$= \square$$

$$\frac{3}{5} = \square \div \square$$

$$= \square$$

$$\frac{12}{4} = \square \div \square$$

$$= \square$$

② 分数に変身させよう

$$0.7 = \frac{\square}{\square} \quad 3.05 = \frac{\square}{\square}$$

$$2.7 = \frac{\square}{\square} \quad 0.025 = \frac{\square}{\square}$$

$$0.46 = \frac{\square}{\square} \quad 12 = \frac{\square}{\square}$$

③ 商を分数で表そう

$$3 \div 4 = \frac{\square}{\square}$$

$$5 \div 2 = \frac{\square}{\square}$$

$$11 \div 13 = \frac{\square}{\square}$$

$$13 \div 7 = \frac{\square}{\square}$$

$$8 \div 5 = \frac{\square}{\square}$$

$$6 \div 12 = \frac{\square}{\square} = \frac{\square}{\square}$$
